

# *INDIA.RUNS*

Build what next India runs on

Track 3

Everyday AI Innovation Challenge

## *Redrob Context & Ideathon Scope*

Redrob AI is building an AI-native ecosystem spanning hiring, productivity, communication, discovery, workflows, recommendations, automation, and intelligent user experiences.

Participants are encouraged to think beyond standalone applications and explore how their ideas can:

Extend existing  
Redrob capabilities

Improve  
experiences for  
Redrob users

Introduce new  
AI-native  
workflows

Strengthen ecosystem  
engagement and  
network effects

## *Important*

Participants are not expected to build a completely new platform from scratch.

Strong submissions will demonstrate:

How the idea leverages existing Redrob capabilities

What new capability, workflow, or value layer is introduced

How the idea strengthens the overall Redrob ecosystem

Why Redrob is uniquely positioned to enable this experience

# *INDIA.RUNS*

Build what next India runs on

Track 03

Everyday AI Innovation Challenge

Team Name : Team Saathi

Problem Statement : 140 Million Seniors. Zero Real Solutions.

Team Members : Pawan Kumar — B.Tech CSE, Graduate, 2025

## Problem We Want To Solve

### Questions

- What everyday challenge are you addressing?  
Seniors miss medicines daily and avoid English-only, complex apps – leaving them with no daily check-in system.
- Who faces this challenge?  
India's 140M+ senior citizens, especially low-literacy, non-English speakers living alone or far from family.
- Why does it matter?  
Missed doses and zero emergency alerts turn small health issues into preventable hospital visits – and family members find out too late.

## Idea Overview

### Questions

- What is your AI-powered idea?

Saathi — an AI-powered Senior Life OS that combines a Hinglish voice companion, medicine tracking, one-tap SOS, and a family dashboard in one app.

- How does it solve the problem?

It replaces missed reminders and silent emergencies with daily voice check-ins, automatic family updates, and instant GPS-based SOS alerts — no typing, no English required.

- How could it fit within or enhance the Redrob ecosystem?

Saathi extends Redrob's AI-native ecosystem into the caregiving and eldercare layer — using the same conversational AI, automation, and personalization principles Redrob applies to hiring and productivity, now applied to daily life and family well-being.

## Understanding The User

### Questions

- Who benefits from the solution?

Senior citizens living alone or far from family, and their adult children who worry but can't check in constantly.

- What challenges do they face?

Seniors struggle with English-only apps, forget medicines, and have no way to call for help. Their children can't monitor health from another city without constant phone calls.

- How does your idea improve their experience?

Seniors get a voice-first companion that speaks their language and handles reminders and emergencies automatically; family gets daily updates and instant SOS alerts – without having to call or worry.

## User Journey & Experience

### Questions

- How would someone use your solution?

A senior opens Saathi each morning, gets a voice medicine reminder, taps once to confirm, and talks to the AI in Hinglish anytime they need help or company.

- What does the experience look like?

Morning check-in → voice reminder → one-tap confirmation → optional AI chat → vitals logged → family auto-updated → SOS available anytime with one tap.

- Why is it intuitive and easy to use?

No typing, no English, no menus to learn — just voice and single taps, built for someone who's never used a smartphone app before.

## User Journey & Experience

### Recommended Visual

#### Morning Reminder

"Take your BP medicine"  
— voice + tap to confirm

#### AI Chat (anytime)

"Mera sar dard kar raha  
hai" — answered in  
Hinglish

#### Vitals Logged

"BP, sugar auto-tracked,  
trend shared w/ family

#### SOS Available

"One tap — family gets  
location in seconds"

## AI-Powered Experience

### Questions

- Where does AI contribute value?

AI powers the conversation itself – understanding Hinglish, remembering context, and responding like a companion rather than a chatbot.

- What is automated, personalized, or improved?

Medicine reminders, vitals tracking, and family updates all run automatically. Responses are personalized to the user's language, health conditions, and routine – not generic.

- Why is AI important to the experience?

Without AI, this would just be a checklist app. AI is what lets a senior speak naturally instead of navigating menus, and what makes every interaction feel familiar instead of robotic.

## Accessibility & Inclusivity

### Questions

- How can diverse users benefit?

Non-English speakers, low-literacy users, and seniors unfamiliar with smartphones all benefit — Saathi works entirely through voice in Hinglish, with read-aloud responses and large, simple buttons that need no prior app experience.

- How does the solution remain accessible and easy to adopt?

No typing or English required — just voice and single taps. A language toggle, high-contrast interface, and one-tap SOS mean a first-time smartphone user can start using it within minutes, with zero learning curve.

## Impact & Real-World Benefits

### Questions

- What positive change could this create?

Fewer missed medications, faster emergency response, and seniors feeling less isolated day to day.

- How would users benefit?

Seniors get independence with help always one tap away. Families get peace of mind through daily updates instead of constant worried calls.

- How could Redrob users or communities benefit from it?

Many Redrob users balance careers with aging parents back home — Saathi keeps them connected to a parent's safety without disrupting their work day.

## Future Potential

### Questions

- How could the solution evolve?
  - **Now:** Hinglish voice companion, medicine reminders, SOS, family dashboard
  - **3–6 months:** More Indian languages, wearable integration for vitals, doctor-connect feature
  - **6–18 months:** Predictive health alerts using AI, partnerships with hospitals/NGOs, expansion to tier-2/3 cities
- What additional features or use cases could emerge?

Fall detection via phone sensors, medication delivery partnerships, community check-in groups for seniors without nearby family, and voice-based mental health/loneliness support check-ins.

## Tech Architecture

# Competitive Analysis

| Feature                | Generic Reminders | Family Monitoring | Saathi |
|------------------------|-------------------|-------------------|--------|
| Voice-first (Hinglish) | ✗                 | ✗                 | ✓      |
| Works for non-literate | ✗                 | ✗                 | ✓      |
| One-tap SOS            | ✗                 | Partial           | ✓      |
| Family auto-updates    | ✗                 | ✓                 | ✓      |
| No app navigation      | ✗                 | ✗                 | ✓      |
